VANGUARD PasswordReset ™

Vanguard PasswordReset saves time and money by allowing users to reset their own password.

Additionally, PasswordReset addresses the common problem of forgotten passwords. It empowers employees, customers and other authorized users to quickly and securely change their own passwords anytime using their web browser without support from IT.

Key Features

Web-based end user self-service password reset.
Uses standard challenge and response technology for user validation.
All web-based transactions are fully secure and en-crypted.
Integrates with our Vanguard Tokenless Technologies to deliver token passcodes.

How much are forgotten passwords really costing your organization?

Vanguard's own internal research has shown the average organization experiences 4 password resets per employee per year.
To put this in perspective, at a cost of $70 per call, that means an organization with 20,000 employees would be spend-ing $5,600,000 per year just on password resets!

The Solution: VANGUARD PASSWORD RESET

For a very small percentage of the figure mentioned above, Vanguard PASSWORDRESET could ensure you spend your IT budget on more strategic security imperatives and have your security personnel focused on higher value activities.

Password Reset addresses the common problem of forgotten or expired RACF passwords. It empowers employees, customers and other authorized users to quickly and securely change their own passwords anytime using their web browser.

How Vanguard PasswordReset Works

- Vanguard PasswordReset is easy to use. It begins with a quick and easy registration process.
- Users connect to PasswordReset via their web browsers and enter a series of questions and answers of their own choosing.
- They are encrypted by PasswordReset and stored in a secure RACF database on the mainframe
- If users later forget their password, they simply connect to PasswordReset via their browsers and enter the answers to the questions.
- PasswordReset authenticates the user and assigns the new password.

WE are Mainframe Strenth!

Unlike other password resetting software, Vanguard PasswordReset runs on the mainframe z/OS - the enterprise's most trusted platform.

It was designed from the ground-up to work hand-in-hand with IBM's Secure Security Server (RACF).

It combines the benefits and convenience of a web-based interface with the proven stability, integrity, and security of RACF.

All web-based transactions are fully secure and encrypted

Key Differentiators

- User self-service enrollment

- Provides a simple method for remediation of elevated access and authorities.

- Web enabled, can be operated on z/OS Security Server or independently.

- Flexible pricing model

- Our Pricing is Value Driven – Only pay for what you use – we want our customer to be successful!

- Your success guarantees our success!
